January 2011

Support for this program evaluation was provided in part by a grant from the Kaiser Permanente Foundation Community Benefit Program Northern California Region.
Safe School Ambassadors (SSA) is a student-centered bystander education program developed by Community Matters to reduce bullying/mistreatment and enhance school climate. A two-part program evaluation was designed to assess the efficacy of the program’s logic model, and its impact on school-level discipline indicators; several statistically significant outcomes ($p < 0.05$) were obtained.

For the first part, a two-year evaluation was conducted in five middle schools in Texas using a quasi-experimental pre-post-post design. After two years, rates of helpful intervention were higher for male Ambassadors than for their controls. Ambassadors’ Friends noticed more helpful interventions and reported observing less mistreatment than Friends of Key Students at the control schools. Process data indicated positive effects on discipline and overall climate.

For the second part, suspension and other discipline data was gathered from nineteen schools that implemented the SSA program with a high degree of fidelity to internal benchmarks, and from demographically matched non-SSA schools that served as controls. Analysis of suspensions and other discipline indicators at SSA schools showed reductions averaging 33%, while indicators at matched control schools rose 10% during the same years.

Selected tables and figures follow.

* In year 1, the Climate Survey was completed by all students in grades 6-7, plus any 8th graders who were named by Ambassadors or Key Students as “Friends”. In year 2, all students in grades 7-8 completed it.
Key Adults were asked about how often in the previous month they noticed students intervening to prevent or stop mistreatment. Y-axis is frequency of response; scale ranges from 1 = never to 5 = always.

The decrease of 0.1174 at treatment schools was significant (p<0.0001).

The decrease of 0.1174 at treatment schools was significant (p<0.0001).
